Technical Requirements

The following general components compose the All-Access system:

- [All-Access Client Requirements](#)
- [InstallOn Product Requirements](#)

All-Access Client Requirements

All-Access Client is designed to work with most systems running the Windows operating system, and has no hardware or operating system requirements of note.

Before installing All-Access Server, verify that your environment meets the following requirements.

InstallOn Product Requirements

For the requirements of individual Embarcadero products that are stored in the Server repository, consult the product documentation.

The following table lists the InstantOn/Install applications that can be launched from the All-Access Client. Grouped by tool type, each entry provides a link to the main Embarcadero Web page for the product.

[Embarcadero® EA/Studio™](#)

[Embarcadero® Schema Examiner™](#)

Product documentation can be found at the Embarcadero Technologies Product Documentation page. Depending on the product, documentation includes user guides, tutorials, installation guides, new feature guides, and evaluation guides.

Installing All-Access Client

The All-Access Client is available in three different modes:

- [Install Network Licensing Mode](#)
- [Install USB Package Mode](#)
- [Install Workstation Mode](#)

Install Network Licensing Mode

Network licensing mode enables users to connect to All-Access Server via a Web browser and download the client automatically from the repository. Licensing is automatically handled by All-Access Server, and no action is necessary to immediately begin using the applications. As such, there are no specific installation tasks required, other than notifying users of the host address for Server.

Install USB Package Mode

The USB mode of the Client also handles licensing automatically. Therefore, no prerequisites are needed for users to immediately begin using the applications. As such, there are no specific installation tasks required.

NOTE: This mode has a fixed expiry date, after which the Client will no longer work.

Install Workstation Mode

In order to run the Client in Workstation mode, each application must be activated by the user before it will run.

When the All-Access Pass provided with this mode is purchased, an email will be sent to the user containing a passcode. The passcode is used on the All-Access Members page to obtain serial numbers for each valid product. Once the serial number has been obtained, use individual product's **Registration Wizard** commands to activate it.

To obtain a serial number for a product:

- 1 Navigate to the All-Access Members page and log on using Developer Network credentials. If you need a Developer Network account, click that link first and proceed with the account creation process.
- 2 In the **Enter your Passcode** field, enter the passcode which was supplied in your purchase email. Click **Add**.
- 3 Click the **Generate Your Key** link associated with the product for which you are obtaining a serial number. The link is replaced with a valid serial number.

NOTE: The **Registration Wizard** automatically appears when you start an application with the Client that has not been registered via a serial number. Follow the instructions in the Wizard to register the software, entering the serial number you received from the membership site when prompted.
