

4.6 special terms that apply to C++Builder 6 Professional Edition

Additional license terms for deploying local database Works

C++Builder 6 Professional includes redistributable files identified as “ClientDataSet Redistributables” for creating local database application Works. A valid license of C++Builder 6 Professional includes the right to deploy the ClientDataSet Redistributables as part of your Work for the purpose of supporting local data access on a single computer. “Local data access” refers to the act of communicating between the Work, as a resident on a single computer, and the ClientDataSet Redistributables that are also executing on the same computer to access data on the same computer.

The Professional Edition of this software does not include the right to use “ClientDataSet Redistributables” for the purpose of creating multi-tier or client/server Works. However you may deploy a Work that uses the “Briefcase” mode for manually sharing data across computers with the use of “ClientDataSet Redistributables” (e.g. you may copy the datastore onto a tangible media and physically move the datastore to another computer).

Professional ClientDataSet Redistributables include the following files:
midas.dll

Quick Start Guide

C++Builder® 6

Welcome

Welcome to C++Builder® 6. This Quick Start Guide provides an overview to help you start using the product right away.

About C++Builder® 6

Installing C++Builder® 6

Please refer to the install.txt file provided on the CD for detailed installation instructions specific to your edition.

Registering C++Builder 6

You will be prompted for a serial number and key when installing C++Builder 6. You will find the serial number and key sticker on the License Certificate Card located in the C++Builder 6 packaging. If you have any questions about installing, visit our Support web site at <http://support.codegear.com> for assistance.

Other important information

The C++Builder 6 CD provides important information relating to your product, including installation instructions, release notes, what's new, and important supplementary information that might not appear in the main product documentation. You will find these files in the root directory of the CD.

C++Builder 6 Companion Tools

Download additional software that works with C++Builder 6 from the CodeGear web site at <http://cc.codegear.com/partners/bcb6/index.html>.

CodeGear Addendum to License

The following addendum to the CodeGear™ C++Builder® 6 Enterprise and Professional license terms shall be effective as of November 25, 2002. You have no right pursuant to this Addendum to deploy the ClientDataSet Redistributables prior to November 25, 2002.

C++Builder 6 Enterprise and Professional Editions

4.7 special terms that apply to to C++Builder 6 Enterprise Edition

Additional license terms for deploying multi-tier Works

C++Builder 6 Enterprise includes redistributable files identified as "ClientDataSet Redistributables" for creating multi-tier and client/server Works. A valid license of C++Builder 6 Enterprise includes the right to deploy the ClientDataSet Redistributables as part of your Work for the purpose of supporting data sharing among two or more computers.

"Data sharing" refers to any use of the ClientDataSet Redistributables, including but not limited to DataSnap™ Middleware Drivers, for supporting the transmission, by any means, of data from one computer to another computer that get resolved back to the original datastore.

The DataSnap Middleware drivers are identified as TSOAPConnection, TSocketConnection and TDCOMConnection in the VCL framework and TSOAPConnection in the Borland® Component Library for Cross-platform (CLX™) framework.

Enterprise ClientDataSet Redistributables include the following files:

dsnapp60.bpl
dsnappcon60.dpl
dsapcrba60.bpl
dsnappent60.dpl
webdsnapp.bpl
midas.dll
